Continuation of 11. does NOT place the application in condition for allowance because: the arguments presented are not persuasive.

Regarding the argument that the Smith et al. reference fails to disclose changing the repeating pixel pattern that is displayed according to the current status, as recited in claim 4. Examiner relies on Smith et al in teaching the repeating pixel patterns within the graphs being correlated to the diagnostic status of the apparatus. The combination of the pixels which fill the pie-chart as disclosed by Streefkerk et al with the profiles created by the lengths of the bars as explained by Smith would have simplygiven one of ordinary skill in the art a visual "bar-graph" description of the pixel patterns filling the pie chart of Streefkerk et al. See response to arguments in the Final Office Action dated August 14, 2009.

Regarding the argument that the '163 patent fails to disclose changing the repeating pixel pattern according to the current status. Patent '163 is relied upon for teaching the concept of repeating pixel patterns changing according to a current status of a system. The primary reference (Patent '277) teaches the actual display structure and the concept of displaying a current status in the form of graphical diagrams as shown in the rejection of claim 4. In response to applicant's arguments against Patent '163 individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See In re Keller, 642 F.2d 413,208 USPQ 871 (CCPA 1981); In re Merck & Co., 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Applying a well known technique to a well known device has been shown to be obvious if the results of the combination are predictable to one of ordinary skill in the art.
